Ahmed Bahaa

Discussion 1

1- In the htdocs folder in the C: drive
2- Hyper text documents
3- You can install the MAMP package on it and would work normally
4- Facebook, Wikipedia and skillshare
5- So that one server can give the website to many users without the need for the code to be locally available, for security reasons and so that programmers can change the server code therefore changing the code on every user pc
